Course Code: DSA0301

Slot: A

Course Name: Natural Language Processing

Course Faculty: Dr K V Gnanavel

Project Title: HealthScribe AI – Medical Report Simplification and Patient Guidance Assistant

Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)

Module 4: User Interface, Storage & Deployment

- Design a simple and user-friendly web interface.
- Securely store medical reports and generated results in a database.
- Display simplified reports and patient guidance on the dashboard.
- Test the system for accuracy, usability, and performance.
- Deploy the application for real-time patient use.

Project Description: (here you write what you did in this project (contribution) including Model Description

Module 4 – The HealthScribe AI – Medical Report Simplification and Patient Guidance Assistant is designed to make complex medical information easier for patients and caregivers to understand. This module focuses on developing a **simple, secure, and user-friendly platform** for the HealthScribe AI application. A responsive web interface allows patients and caregivers to easily **upload medical reports, view simplified results, and access patient guidance**. The generated reports and related information are securely stored in a database to maintain **data privacy, integrity, and reliability**. A dashboard presents medical summaries, insights, and recommendations in a clear and organized format.

The system is tested for **accuracy, usability, security, and performance** to ensure reliable operation. Finally, the application is deployed on a suitable cloud platform to provide **real-time accessibility, continuous availability, and scalability**. Overall, this module integrates the interface, storage, testing, and deployment components to provide a complete and efficient healthcare assistance system.
